✓ Maximize Business Performance

✓ Provide Organizational Transparency

✓ Yield the Lowest Cost of Ownership

✓ Close the Loop from Compliance to Onboarding

✓ Remove Illegibility, Incompleteness in Data Capture, Review, and Communication

✓ Eliminate the Need for Multiple / Redundant Compliance Systems

319 InSight is a cloud-based compliance automation solution that has been engineered in all aspects as a fully reconfigurable platform, providing significant advantages to any organization. A reconfigurable platform allows for quick, easy and continual modifications to its data capture, users, portals, dashboards and reports as needs evolve, without interrupting business operations whatsoever. Its unique architecture provides for configuration rather than development; significantly reducing the cycle time to deploy, update and enhance its functionality.

Importantly, 319 InSight conforms to each organization's unique procedures and workflows, providing full process automation and allowing implementation to occur with negligible adoption time needed.

319 InSight's proprietary workflow engine is an extremely powerful technology that enables dynamic event-based routing, permissions, notifications, scheduling, prioritizing and tasking. This technology enables workflow processing to occur in parallel pathways, sequential pathways, or even a combination of both throughout the lifecycle of a compliance program. Tasks are achieved faster and more efficiently with 319 InSight, while seamlessly matching traditional offline behavior.

Its automated, in-line decision mechanisms greatly reduce workload, increase throughput and assure data accuracy. This places fewer demands on administrative staff, allowing compliance responsibilities to be completed with fewer resources and at a much lower cost.

Key Features

✓ Reconfigurable, Customizable Workflows

✓ Tailored Questionnaires, File Routing, Notifications, and User Assignment

✓ In-line Contact and Company Screening with Pinpoint Technology

✓ Parallel and/or Sequential Processing

✓ Multi-Role Contributors and Automated, In-line Decision Logic

✓ Sponsor and/or Self-Program Start Processes

✓ Multi-Language Portals, Questionnaires and E-Mails

✓ Data Authentication and Auditing

✓ Dynamic Data Analysis and Custom Risk Evaluation

✓ Simple User Management and Segmentation

✓ Custom Workstations, Dashboards, and Reports

✓ Single-Sign-On Capability

✓ Platform and Network Scalability

✓ Fault-Tolerant, Highest Security and Performance Cloud Networks

---

The platform provides for on-going application expansion, which reduces acquisition costs and offers a single destination source for all compliance-related activity, maximizing productivity. As additional applications are deployed, 319 InSight generates cross-functional reporting, revealing key business insights and helping leaders make better, more informed decisions.

319 InSight offers expert-guided process engineering services along with each installation, in order to fully optimize business processes and to assure a successful transition to the platform. Each case is approached in a unique manner, so that organizations can make the most out of their past investments, while evolving into a modern, intelligent compliance department.
